PSI provides high level security and security-related services to a variety of Federal Government agencies, commercial clients and global entities.

Founded in 1998 with annual revenues in excess of $60 million, PSI specializes in providing integrated, multi-disciplinary security services to our Government and commercial clients. A wholly-owned subsidiary, PSI Protect was established in 2010, and provides elite protective force (PF) services to a number of Federal government clients.

We are widely recognized for providing comprehensive programs that integrate a broad spectrum of security disciplines including: physical, technical, personnel, operations, communications and cyber. PSI is an industry leader in the use of advanced threat and vulnerability modeling methodologies, cost-benefit analyses, and other risk management tools which help to optimize cost effectiveness.

PSI employs a talent pool of highly skilled, seasoned professionals each of whom possesses an impressive background in a variety of disciplines. PSI’s corporate leadership team possesses over 200 years of combined national level security services experience in the areas of protective force services, on-site security surveys, vulnerability and threat assessments, risk assessments, personnel security adjudication, critical infrastructure protection and physical security training.

In addition to our domestic programs, PSI has conducted international operations in support of both the U.S. and hosting nations:

- The Middle East
- Central and South America
- Africa
- Europe

Small Business Teaming

PSI's selection of teaming partners is based on the needs of the client, the specific tasks required and the need to fulfill small business participation requirements. PSI currently maintains relationships with both large and small businesses (including 8(a), Woman-Owned, HUBZone, and Service-Disabled Veteran Owned businesses) and holds Teaming Steering Committee meetings to grow and maintain those relationships. PSI also has an internal business development group that actively seeks new business partners through searches of Small Business Association (SBA) information, the System for Award Management (SAM) site, and participation in industry conferences.

PSI's Information Technology competencies provide our customers with the full spectrum of support, planning, operations, development, and integration to ensure operability, security, stability, and scalability.

**Cyber Security:** PSI delivers cyber security expertise to government and commercial clients worldwide that addresses the complex issues related to building a comprehensive cyber security strategy. PSI's expertise especially serves those engaged in critical infrastructure protection and who work with sensitive information.

**Continuity & Recovery Planning:** Being prepared for the unexpected with the ability to minimize impact on operations is critical in today's technology-based environments. PSI provides customers with what they need to plan, prepare, mitigate risk, and respond to the occurrence of such an event.

**Managed IT Support Services:** PSI researches, designs, develops and maintains IT systems for businesses and government organizations. PSI can analyze organization IT requirements and can conduct architecture reviews to ensure that solutions comply with customer and industry standards and needs.

**Systems Integration:** PSI systems integrators provide support to clients in the process of linking together different computing systems and software applications physically or functionally, to act as a coordinated whole. Our Systems Integration processes bring together discrete systems utilizing a variety of techniques such as computer networking, enterprise application integration, business process management or manual programming. Solutions sets often utilize off-the-shelf software, and pre-configured components as opposed to more expensive, customized programming packages or unique manufacture components and can address needs of legacy systems and sensitive information systems. PSI also understands budget constraints and can apply open-source technologies.

PSI Cyber Security – Creating the technologies, processes, and practices to protect networks, computers, programs and data from attack, damage or unauthorized access.

Support for organizations’ safeguards and security operations extend beyond personnel and physical security – PSI recognizes that accurately designing and implementing key cyber security solutions has a profound impact on the overall security and performance of our customers’ enterprise.

PSI delivers cyber security expertise to government and commercial clients worldwide that addresses the complex issues related to building a comprehensive cyber security strategy. PSI’s expertise especially serves those engaged in critical infrastructure protection and who work with sensitive information. Our capabilities in Information Assurance, IT Risk Analysis, IT Security Assessment, Security Policy, and Penetration Testing converge to allow us to conduct security posture assessments within the critical infrastructure environment. PSI performs cyber security competencies from both a top-down approach and also specific to specialized and critical issue areas.

Our approach analyzes functionality of the network and its design is evaluated through analysis of existing systems and documentation by use of data gathering tools, assessment procedures, and industry baseline standards. Our risk, vulnerability, and quality assessments of networks include the analysis and review of ports and protocols, application and network devices, current system baselines, patch management, backup and contingency of operations capabilities, administrative and user access controls, and policies and procedures. PSI takes an active approach to detect vulnerabilities through internal penetration testing and execution of various threat scenarios. The tests and assessments performed by PSI provide an understanding of all layers of the enterprise network security posture—assuring confidentiality, integrity and availability of data and resources.

PSI’s Risk Management & Analysis processes of selecting and implementing business and security countermeasure options achieve an acceptable level of risk at an acceptable cost.

PSI’s prescribed analytical risk management (ARM) process provides a systematic approach to acquiring and analyzing the information necessary to guide decision makers in the protection of assets and operations and the allocation of security resources. Experts on PSI’s staff have been involved with the ARM process from its inception as an outcome of the 1998 attacks on the embassies in Kenya and Tanzania. Since that time, the capability of ARM has been substantively expanded. The process utilizes risk analysis techniques designed to allow clients—whether corporate leadership, security managers, analysts, or technicians—to perform their planning, implementation, and evaluation of risk-based security strategies whether currently existing or for future business endeavors.

PSI frames risk analyses and vulnerability assessments from an all-hazards approach—natural, man-made, and technological—and the full range of inclusive incidents. From these vulnerability assessments, PSI can develop a Design Basis Threat (DBT) to profile the type, composition, and capabilities of potential adversaries. The DBT outlines the set of adversary characteristics for which the operators and organizations together have protection responsibility and accountability.

PSI has decades of professional experience conducting vulnerability assessments of critical assets and high value targets nationally and internationally and has performed assessments ranging from nuclear facilities and power plants to metropolitan transit systems and international banking organizations.

A few of our clients:
International Operations

PSI International Operations provide international security and logistics support with operational experience globally.

PSI personnel operating internationally have backgrounds in military special operations, intelligence, police, or other security disciplines. They are widely experienced in developing realistic but workable training and support plans for security managers and organizations ranging from indigenous paramilitary police and military forces, to guard forces for critical U.S. and government facilities, to VIP and critical asset protection teams.

PSI is highly skilled in quickly assessing mission requirements against postulated criminal, terrorist, or other potentially destabilizing threats, determining needed capabilities, factoring in any available technological force multipliers, and presenting clients with workable security operations solutions, backed up by contingency plans for rapid reinforcement and/or evacuation.

Examples of PSI’s international operations experience include:

- **Europe** - PSI supported U.S. firms working in the international nuclear energy community.
- **Iraq & Afghanistan** - Deployment of security personnel in support of both the U.S. Government and the hosting countries.
- **Pakistan** - Support through the U.S. Department of State to provide training to its key protective divisions responsible for protecting Pakistani national leadership to include the mentoring of law enforcement personnel.
- **Bogota, Colombia** - Operated as an advisor and service provider to the Anti-Terrorism Assistance Program (ATAP).
- **Mexico** - Provided training and technical assistance for law enforcement and counter-narcotics programs.
- **Africa** - Through the Africa Peacekeeping Program (AFRICAP) PSI conducts training operations in support of emerging and transitioning nations.

This global experience enables PSI to bring much more in-depth experience to the protection of critical resources.

PSI mitigates organizational risks by resolving personnel, physical, and security issues and providing the resources to sustain the ability to operate during a crisis event.

PSI provides a complete portfolio of Integrated Security support services to ensure protection, identify, or reduce risk, and where needed, evaluate, respond, and recover organizational assets from incidents across the full range of natural, technological, and manmade undesirable events.

**Personnel and Physical Security:** PSI provides high quality, high profile, professionally trained security personnel and protection force (pro-force) teams to a wide variety of facilities. Services offered include: Plain clothes or a fully integrated uniformed guard force; armed security specialists/pro-force fully trained and qualified in firearms use; DOE and DoD cleared guard personnel.

**Operational Security:** PSI’s Operational Security capabilities provide organizations with the processes to protect critical information from adversary observation. In addition providing personnel to carry out operational security programs, PSI’s team of experts provide organizations with capabilities, operational assessments, intelligence analysis, and intelligence program management.

**Training, Testing & Evaluation:** PSI has developed, implemented, and managed security training programs for clients that address a range of needs including, emerging nation military and police force training, protective force programs for highly sensitive sites in the U.S., and operational security training programs for large installations. For all of its training programs, PSI uses the Systemic Approach to Training (SAT). This approach ensures personnel are expertly prepared for assignments by gaining the necessary knowledge, skills, and attitudes to fulfill the most critical efforts.

**Nuclear Materials Management & Accountability:** PSI provides highly classified program support for managing and safeguarding U.S. nuclear materials (Category 5) worldwide to include materials entering or exiting the U.S. PSI assists tracking, reporting, and reconciling nuclear material transactions and reports for the DOE National Nuclear Security Administration (NNSA).

A few of our clients:
PSI identifies and analyzes enterprise missions and operations to successfully plan, solidify, transition, or reengineer enterprise risk management solutions.

PSI's established and effective capabilities in Security Strategies and Mission & Operational Analysis provide our customers with the planning strategies to prepare for the complex task of protecting assets among rapidly changing political, social and technological changes.

Our processes and methodologies are closely aligned to preparedness management programs such as those used by government and commercial entities.

**Security Strategies**: A comprehensive Security Strategy is as critical as a business plan to enterprises expanding business opportunities. With PSI's expertise to effectively support new and ongoing client operations, our Senior-level team supports all aspects of an organization’s security strategy including strategic planning concept of operations (CONOPS), business plans, implementation plans, system architecture plans to enable best-practice security strategies.

**Mission & Operations Analysis**: PSI's experience in conducting Mission & Operations Analysis for commercial organizations, military organizations, and the U.S. intelligence community provides PSI with a full understanding of the importance of enterprise and strategic risk management.

The Analytical Risk Management (ARM) methodology used by the Federal government and under commercial adoption provides a systematic approach to acquire and analyze information necessary to support decision makers in the protection of critical assets, mission and operations. PSI uses this process to allow stakeholders – whether corporate leadership, security managers, analysts, or technicians – to perform the planning, implementation, and evaluation of projected corporate ventures.

**A few of our clients:**
Utilizing proven risk management, business process and business
continuity, and organizational analyses, PSI evaluates and secures
critical infrastructures across disciplines.

Limited resources, personnel, and budgets force organizational
managers to identify and prioritize corporate assets deemed most critical
to ensuring preparedness and/or mitigation of an undesirable event.
Effective and thorough preparedness planning and mitigation strategies
can help ease the strain on limited resources. Without preparedness
planning and mitigation strategies, critical assets could be left exposed
to risks and in the end cost more resources.

**Preparedness Planning:** When an organization faces complex internal
or external risks, the challenge is to effectively prepare for or mitigate
calculated threats. To ensure your organization’s infrastructure is
sustainable during any type natural, manmade, or technological event,
PSI provides experts who understand the critical steps to developing
successful continuity of operations (COOP) plans, business continuity
plans (BCP), Critical Infrastructure Protection (CIP) planning, and
solutions for all phases of emergency preparedness.

**Mitigation Strategies:** Second to preparedness planning, PSI helps
establish the structures, specifications, and protocols to mitigate risks
and the effects of incidents. This may include, for example, the design
and development of emergency operation centers (EOCs), occupant
evacuation plans (EOPs), relocation sites with communication
and transportation strategies, plans, and SOPs.

PSI’s preparedness planning and mitigation strategy planning align to
emergency preparedness management programs from both commercial
Prioritization of what is important to an organization can be challenging
and substantive skill and cooperation are required to determine the
preparedness level of activities needed to ensure successful response
to and recovery from an incident.

**Decision Support for Incident Management**

**Incident Evaluation**
- Incident Recognition
- Verification / Validation
- Event Driven Security Triggers
- EOC Activation
- Occupant Emergency Plans (OEP)
- Threat / Intel Acquisition

**Incident Response**
- COOP Operations
- Team Activations
- Relocation Sites
- EOC Operations
- Media Control / Crisis Communications
- SOPs
- Incident Command Systems ICS & NIMS (HSPD-5)

**Enterprise Recovery or Reconstitution**
- Predefined Goals
- Business Recovery Plans
- Reconstitution Plans (FCD-1)
- Funding
- Lessons Learned

---

**PSI provides expert incident evaluation, response, and recovery plans, programs, and operations to ensure successful organizational recovery and reconstitution.**

PSI’s management of entire lifecycle of an incident provides end-to-end mitigation strategies to ensure continuing operations or recovery of operations. All three key phases of an incident are managed:

**Incident Evaluation**: Characteristically, a threat or incident unfolds in two ways—with or without warning. Although continuity programs may be years in development, at the time of an event, critical decisions are expected within minutes or hours. PSI experts have established effective procedures and protocols to mitigate the risks to operations when threats are identified and overall risks increase. These protocols allow decision makers to change operating procedures and establish alternative responses.

**Incident Response**: Viable incident response requires time-sensitive actions taken at the onset of an event where undesirable activity could bring harm to the organization. PSI’s experts understand that response must be to all types of threatening incidents: natural or manmade crises, cyber incidents, public release of compromising information via social media or other online avenues, or even the untimely departure or death of a key leader. The timely response to an incident ensures the organization has the strategies, protocols and procedures, and predetermined mechanisms to skillfully address critical infrastructures for resolution to respond to the incident.

**Enterprise Recovery and Reconstitution**: Business recovery is more than recovery; it’s a return to a new dimension of operation. PSI implements processes for an integrated effort to restore an infrastructure and the social and economic life of an enterprise to a normal or improved level of operation following a crisis event. PSI’s Enterprise Recovery and Reconstitution experts provide an organization a strategy and a game plan to not only recover from an incident, but to reestablish itself among incident targets to gain both position and value in the market place.

---

*PSI Experts have provided Incident Evaluation, Response, and Recovery Solutions to Executive Branch Departments & Agencies, the US Military Services, Department of Homeland Security & their Offices & Bureaus, and to commercial, public, and private organizations worldwide.*
Guard Force Operations

Capabilities

Guard Force Personnel
- Armed and/or Unarmed Personnel
- Gate Control / Site Security
- Roving Patrols
- Escort
- Visitor Access Control

Guard Force Operations
- Central Communications/Security Center Management
- Threat Assessment
- Emergency Preparedness Evaluations
- Badging and Credentialing Management

Guard Force Training
- Baseline Force Protection
- Post/Assignment Specific Tasks
- Team Tasks
- Customized & Refresher Courses

An active, vigorous, and well trained and equipped security presence provides a visible deterrent and a proactive approach to responding to potential incidents.

PSI and its wholly owned subsidiary, PSI Protect, provide high quality, high profile, professionally trained security officers and protection force team members to federal and commercial customers.

Our uniformed personnel are carefully screened, selected, and trained to offer the highest level of service. Among the comprehensive range of uniformed security support services that we offer, PSI Protect security specialists and officers perform:

- Armed and Unarmed Post/Gate Control (Uniformed & Armed to Customer Requirements)
- Security Cleared Personnel – DoD Top Secret/DOE “Q”
- Magnetometer Screening
- Roving Foot & Vehicle Patrols
- Central Communications/Security Center Management
- CCTV & Alarm Monitoring
- Dignitary Protection
- Threat Assessment
- Emergency Preparedness Evaluation
- Vehicle & Visitor Screening/Badging
- First Responder Emergency Services
- 24/7 Shift Coverage & Emergency Scale-Up

For customer’s requiring training program development and/or implementation, PSI’s training program encompasses three modules and can be tailored to suit your needs:

Baseline Force Protection
- Weapons Qualification
- CPR & First Aid
- Principles of Evidence Officer survival
- Lethal/Non-Lethal Force
- Threat Tactics
- Administrative Policies
- Situation Reporting

Team Tasks
- Special Response Teams
- Bomb Search Teams
- Opposed Room Clearing
- Boat, Vehicle, Facility, and Aircraft Search
- Hostage Handling

For over a decade PSI has provided professional guard force personnel and management to our customers large and small. From HQ Campus-style sites, to remote high security sites, PSI provides comprehensive services to meet our customer needs.
